Frontend Engineer with 5+ years of experience. At dLocal, a fintech platform processing \$41B for the world biggest brands, I led the launch of a new Home page to track key payment metrics for 760+ B2B customers. Interested in AI and Agentic Coding, Frontend Architecture, Web Performance, Open Source, and Developer Experience.

Professional Experience

Senior Frontend Engineer	dLocal	August 2025 - March 2026
--------------------------	--------	--------------------------

Developed core features for the Merchant Dashboard, supporting 3,200+ MAU across emerging markets.

- Built a new central dashboard (Home page), using React and TypeScript, implementing component architecture, state management and feature flagging, to show balance, payment volume and chargebacks data.
- Added product analytics for data-informed decisions, by implementing the Amplitude SDK in the internal library consumed by all Next.js micro frontends, with 8+ user events like account switch and report scheduled.
- Integrated LLM-powered agentic coding tools like Claude Code and Cursor AI into the daily workflow, enabling 40% faster prototyping and development with AI agents.
- Resolved dozens of vulnerabilities in frontend security audits from dependency scanning and static code analysis surfaced in Apiiro, protecting against attacks like XSS, CSRF and injection, across 15+ repositories.
- Improved accessibility with semantic HTML, raising the score to 90+ in the Google's Lighthouse report.
- Built other functionalities for the customers dashboard used by 760+ global merchants, in a 10 micro-frontend architecture with TypeScript, Next.js and React.
- Maintained a Storybook-based development process, enabling reusable components, improving unit testing, and increasing velocity.
- Paired with UX designers on interaction states, edge cases, and responsive behavior to turn Figma designs and interactive prototypes into pixel-accurate production UI and UX.
- Monitored stability and quick resolution of production issues in on-call rotation using monitoring, observability, identity and incident management tools (Coralogix, NewRelic, Auth0, PagerDuty)
- Collaborated in an Agile (Scrum) team of 8 developers, including code reviews and pair programming with daily stand-ups and sprint retrospectives.

Technologies: Next.js, React, JavaScript, TypeScript, Material UI, SCSS, TanStack Query, zod, Zustand, nuqs, React Recharts, Feature Flags, Responsive Design, UX, Web Performance, Unit Testing, AWS, Figma, Jira, Swagger UI

Frontend Developer	PwC	August 2021 - July 2025
--------------------	-----	-------------------------

Developed AI Hub, an Azure DevOps extension to bring generative AI capabilities to 500 internal employees globally.

- Simplified the global state of the React application, reducing file size by 50%, by slicing and relocating the data outside of Context API into local components.
- Connected to the C# events micro service to log all user actions such as AI generated work items, test cases, release notes and scripts, adding visibility to feature usage metrics like adoption rates and frequency of use.
- Fine-tuned the AI output quality by implementing a RAG (Retrieval-Augmented Generation) file upload feature, reducing AI hallucinations by 20%, through using the files micro service and the Azure DevOps design system.
- Automated frontend code conventions by implementing ESLint and Prettier into Azure Pipelines CI/CD and local development.
- Revamped the process for handing development work to QA, by introducing a checklist in Azure DevOps wiki, and a dedicated channel for communication and sign off sessions in Teams.
- Modernized the code review process, by introducing guidelines and a pre-review checklist in a pull request template, drastically reducing back and forth between devs and decreasing Time to Merge from 5+ to 1-2 days.
- Implemented accessibility practices by using semantic HTML and adding keyboard navigation and focus order, to meet requirements for 500 employees using the internal AI platform.
- Mentored 3 junior engineers through code review, pair programming, and architecture guidance.

Technologies: React, TypeScript, JavaScript, HTML, CSS Modules, TanStack Query, State Management, Component Library, Code Review, Web Performance, Azure DevOps, Technical Leadership, Team Leadership, Mentor

- Developed Astro, the AI-driven virtual assistant for the workplace experience, helping 90K WAU from US and Canada.
- Built an onboarding experience with a tour (coach marks), to guide users on understanding and trying our new features.
 - Raised accessibility for the most common actions like time entry, by introducing keyboard navigation, keyboard shortcuts, and using semantic HTML.
 - Developed 5+ features integrating REST APIs and using Angular and TypeScript for web, and Capacitor and Ionic Framework for mobile, with testing in Android Studio.
 - Contributed to a cross-functional Agile team of 5 engineers plus product and design, following all agile rituals: backlog refinement, sprint planning, estimation, and retrospectives, all tracked in Azure DevOps.

Technologies: Angular, TypeScript, JavaScript, Capacitor, Ionic Framework, Android Studio, Tailwind CSS, HTML, Redux, Mobile, Web Performance, REST API, Code Review, Kanban

Education

- **Information Technology Analyst**, ORT University. **August 2019 – December 2024**

Skills and Technologies

- **Languages:** JavaScript, TypeScript, HTML, CSS
- **Technologies:** React, Angular, Next.js, Tailwind CSS, Material UI, shadcn ui, styled-components, Redux, TanStack Query, zod, Zustand, nuqs, RESTful APIs, Swagger UI, Node.js, tRPC, Prisma, Testing (Jest), SQL (PostgreSQL), Cloud, AWS, Docker, Infrastructure as Code (Terraform), Claude Code, Cursor AI, GitHub Copilot, Cline, Version Control, Git, GitHub, GitHub Actions, Webpack, Vite, ESLint, Biome, pnpm
- **Methodologies:** SCRUM, Agile, TDD, BDD (Gherkin), Daily Stand-ups, Sprint Planning, Backlog Refinement, User Stories, Git flow, GitHub flow
- **Interests:** Web Performance, Frontend Architecture, AI & Agentic Coding

Projects & Extra

- **Software Mastery™ by theSeniorDev** - 1-year advanced software development program focused on production-ready systems, API Design, software architecture, CI/CD, testing and system design.

Languages

- English: Professional Proficiency
- Spanish: Native Proficiency

Hobbies & Personal

- In my free time, I like to ride my bike, do some yoga or calisthenics, and attend tech meetups.
