Senior Frontend Engineer with 5+ years of experience with React, TypeScript and Node.js. At dLocal, a fintech platform processing \$41B for the world's biggest brands, I led the launch of a new Home page to track key payment metrics for 760+ B2B customers. Interested in frontend architecture, web performance, and AI and Agentic Coding.

Professional Experience

Senior Frontend Engineer

dLocal

Montevideo, UY

August 2025 - March 2026

Developed core features for the Merchant Dashboard, with over 3,200+ enterprise users across emerging markets.

- Built a new central dashboard (Home page), using React and TypeScript, implementing component architecture, state management and feature flagging, to show balance, payment volume and chargebacks data.
- Integrated LLM-powered agentic coding tools like Claude Code and Cursor AI into the daily workflow, enabling faster prototyping and development with AI agents.
- Added product analytics for data-informed decisions, by implementing the Amplitude SDK in the internal library consumed by all Next.js micro frontends, with 8+ user events like account switch and report scheduled.
- Resolved dozens of vulnerabilities in frontend security audits from dependency scanning and static code analysis surfaced in Apiiro, protecting against attacks like XSS, CSRF and injection, across 15+ repositories.
- Built critical functionalities for the customers dashboard used by 760+ global merchants, in a 10 micro-frontend architecture with TypeScript, Next.js and React.
- Monitored stability and quick resolution of production issues in on-call rotation using monitoring, observability, identity and incident management tools (Coralogix, NewRelic, Auth0, PagerDuty)
- Activated SSO auth integration for global clients, by sending mass invitation emails, coordinating real time meetings and troubleshooting issues in Auth0, allowing access to the dashboard to 50+ users.
- Paired with UX designers on interaction states, edge cases, and responsive behavior to turn Figma designs and interactive prototypes into pixel-accurate production UI and UX.

Technologies: Next.js, React, TypeScript, Material UI, SCSS, TanStack Query, Zustand, React Recharts, Storybook, SSR, Feature Flags, Responsive Design, Figma, Unit Testing, Playwright, AWS, Kubernetes, Jira

Frontend Developer

PwC

Montevideo, UY

April 2021 - July 2025

Developed AI Hub, an Azure DevOps extension to bring generative AI capabilities to 5K+ internal employees globally.

- Built the AI Hub extension, creating 6+ new features, with React, TypeScript and Azure DevOps components.
- Fine-tuned the AI output quality by implementing a RAG (Retrieval-Augmented Generation) file upload feature, reducing AI hallucinations by 20%, through using the files micro service and the Azure DevOps design system.
- Built a new right sidebar in the application, to allocate different features like an AI Chat bot integration and a history of all the generated items, using React, TanStack Query and reusable components.
- Automated frontend code quality gates by implementing ESLint and Prettier into Azure Pipelines CI/CD and local development.
- Simplified the global state of the application, reducing file size by 50%, by slicing and relocating the data outside of React Context API into local components.
- Revamped the process for handing development work to QA, by introducing a checklist in Azure Wiki, and a dedicated channel for communication and sign off sessions in Teams.
- Modernized the code review process, by introducing guidelines and a pre-review checklist in a pull request template, drastically reducing back and forth between devs and decreasing time to merge from 5+ to 1-2 days.

- Implemented accessibility practices by adding keyboard navigation with focus order, to meet requirements for 5K+ employees using the internal AI platform.
- Connected to the C# events micro service to log all user actions such as AI generated work items, test cases, release notes and scripts, adding visibility to feature usage metrics like adoption rates and frequency of use.
- Mentored 3 junior engineers through code review, pair programming, and architecture guidance.
- Built an onboarding experience to welcome our users on understanding and trying new features, by implementing a guided tour with coach marks.
- Raised web accessibility for the most common actions like time entry, by introducing keyboard shortcuts, and using semantic HTML and ARIA attributes.
- Developed 5+ features integrating REST APIs and using Angular and TypeScript for web, and Capacitor and Ionic Framework for mobile, with testing in Android Studio.
- Contributed to a cross-functional Agile team of 5 engineers plus product and design, following all agile rituals: backlog refinement, sprint planning, estimation, and retrospectives, all tracked in Azure Boards.

Technologies: React, Angular, TypeScript, JavaScript, HTML, CSS Modules, TanStack Query, Azure DevOps REST API, State Management, Component Library, Code Review, Web Performance, Technical Leadership, Team Leadership

Education

- | | |
|---|-----------------------------|
| ● Information Technology Analyst, ORT University. | August 2019 – December 2024 |
| ● DevOps Certification, ORT University. | August 2024 – December 2024 |

Skills and Technologies

- **Languages:** JavaScript, TypeScript, Node.js, HTML, CSS
- **Frontend:** React, Angular, Next.js, Tailwind CSS, Material UI, shadcn ui, styled-components, Sass, Redux, Zustand, TanStack Query, zod, nuqs, Testing Library, Jest, Vitest, End-to-end (E2E) Testing, Cypress, WCAG
- **Full Stack:** RESTful APIs, tRPC, Prisma, JSON, SQL (PostgreSQL), Cloud, AWS, Docker, Jenkins, Infrastructure as Code (Terraform), Distributed Systems
- **AI & LLM:** Claude Code, Cursor, GitHub Copilot, Cline, LLM, Model Context Protocol (MCP)
- **Tooling:** Vite, Webpack, ESLint, Biome, Git, GitHub Actions, GitLab, SonarQube, Lighthouse, Core Web Vitals
- **Methodologies:** Scrum, Agile, TDD, BDD (Gherkin), Daily Stand-ups, Sprint Planning, Backlog Refinement, User Stories, Version Control, Git flow, GitHub flow, Automated Testing, Design Patterns
- **Interests:** Open Source, Developer Experience, Microservices, AI & Agentic Coding

Projects & Extra

- **Software Mastery™ by theSeniorDev** - 1-year advanced software development program focused on production-ready systems, API Design, software architecture, CI/CD, testing and system design.

Languages

- English: Professional Proficiency
- Spanish: Native Proficiency

Hobbies & Personal

- In my free time, I like to ride my bike, do some yoga or calisthenics, and attend tech meetups.
